

When various image data etc. are displayed on a Web are used in an application of a client, a system of inserting all necessary information into the application only in a simple operation such as a dragging-and-dropping operation, etc. is provided. The utilization of the local disk resources of a client can be further improved by referring to target information on a Web. In a client connected to a network such as Internet, etc., the system includes: a unit for inserting image data into the application of the client by dragging and dropping or copying and pasting each type of image data etc. displayed on the Web browser in the client; a unit for obtaining the URL on which the image data are published, and the information about the image data, and managing them as the attribute of the image data.
